 **Doberman Pinscher: 100.0%**

Life stage: **Mature adult**

Based on date of birth provided.

Health Report

How to interpret Lady's genetic health results:

If Lady inherited any of the variants that we tested, they will be listed at the top of the Health Report section, along with a description of how to interpret this result. We also include all of the variants that we tested Lady for that we did not detect the risk variant for.

A genetic test is not a diagnosis

This genetic test does not diagnose a disease. Please talk to your vet about your dog's genetic results, or if you think that your pet may have a health condition or disease.

Summary

Of the 273 genetic health risks we analyzed, we found 2 results that you should learn about.

BREED-RELEVANT RESULTS

Research studies indicate that these results are more relevant to dogs like Lady, and may influence her chances of developing certain health conditions.

	Deafness and Vestibular Syndrome of Dobermans, DVDob, DINGS (MYO7A)	Notable
	Copper Toxicosis (Accumulating) (ATP7B)	Clear
	Dilated Cardiomyopathy, DCM1 (PDK4, Doberman Pinscher Variant 1)	Clear
	Dilated Cardiomyopathy, DCM2 (TTN, Doberman Pinscher Variant 2)	Clear
	Ehlers Danlos (ADAMTS2, Doberman Pinscher Variant)	Clear
	Narcolepsy (HCRT2 Intron 4, Doberman Pinscher Variant)	Clear
	Unilateral Deafness and Vestibular Syndrome (PTPRQ Exon 39, Doberman Pinscher)	Clear
	Von Willebrand Disease Type I, Type I vWD (VWF)	Clear

Copper Toxicosis (Attenuating)

Lady inherited one copy of the variant we tested for Copper Toxicosis (Attenuating)

Why is this important to your vet?

Lady has a genotype at the ATP7A gene that modifies and may help mitigate some of the symptoms from dogs with variants at ATP7B (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>). This variant is not associated with an increased risk of any disease. As this variant resides on the X- chromosome, male dogs with one copy of the variant are better protected from copper accumulation due to the ATP7B variant than female dogs with one copy of the variant.

What is Copper Toxicosis (Attenuating)?

This genetic variant may help lessen the effects of copper buildup in dogs that also carry the copper toxicosis risk variant ATP7B (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>). On its own, it is not known to cause health problems.

When signs & symptoms develop in affected dogs

A variant in this gene may delay or have no effect on the onset of clinical signs of copper toxicosis in dogs with the ATP7B (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>) variant. If your dog has the ATP7B variant, please read more about the age of onset on the ATP7B page.

How vets diagnose this condition

No diagnostics are required for this variant. If your dog has the ATP7B (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>) variant, please read what diagnostics may be considered on the ATP7B page.

How this condition is treated

No treatment is required for this variant. If your dog has the ATP7B (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>) variant, please read the available treatment on the ATP7B page.

Actions to take if your dog is affected

- No specific action is needed for dogs with this variant alone.
- If your dog also has the ATP7B variant, please review what actions you can take on the ATP7B page (<https://my.embarkvet.com/members/results/health/condition/140102?i=12>).
- Routine veterinary care and a balanced diet are appropriate for most dogs with this result.

Deafness and Vestibular Syndrome of Dobermans, DVDob, DINGS

Lady inherited one copy of the variant we tested for Deafness and Vestibular Syndrome of Dobermans, DVDob, DINGS

What does this result mean?

This variant should not impact Lady's health. This variant is inherited in an autosomal recessive manner, meaning that a dog needs two copies of the variant to show signs of this condition. Lady is unlikely to develop this condition due to this variant because she only has one copy of the variant.

Impact on Breeding

Your dog carries this variant and will pass it on to ~50% of her offspring. You can email breeders@embarkvet.com to discuss with a genetic counselor how the genotype results should be applied to a breeding program.

What is Deafness and Vestibular Syndrome of Dobermans, DVDob, DINGS?

This condition affects the inner ear, which controls hearing and balance. Affected dogs typically develop early-onset hearing loss in both ears and may also show balance-related signs.

When signs & symptoms develop in affected dogs

Signs begin developing in puppies and worsen with age.

How vets diagnose this condition

Genetic testing, clinical signs, and BAER testing may all be used to diagnose this condition.

How this condition is treated

There is no treatment for this disorder.

Actions to take if your dog is affected

- Talk to your vet about your dog's DINGS result so you can plan appropriate monitoring and care.
- Teach your dog visual or hand signal commands early to help you communicate effectively if hearing loss develops.
- Keep your dog's environment calm and predictable. Avoid sudden movements or loud vibrations that could startle them once hearing declines.
- If you notice balance problems or head tilting, provide non-slip surfaces and help your dog move slowly and safely around the home.

Genetic Diversity and Inbreeding

Coefficient of Inbreeding (COI)

Genetic Result: 40%

Our genetic COI measures the proportion of your dog’s genome (her genes) where the genes on the mother’s side are identical by descent to those on the father’s side. The higher your dog’s coefficient of inbreeding (the percentage), the more inbred your dog is.

Your Dog’s COI

This graph represents where your dog’s inbreeding levels fall on a scale compared to both dogs with a similar breed makeup to her (the blue bars) and all purebred dogs (the grey line).

Genetic Diversity and Inbreeding

More on the Science

Embark scientists, along with our research partners at Cornell University, have shown the impact of inbreeding on longevity and fertility and developed a state-of-the-art, peer-reviewed method for accurately measuring COI and predicting average COI in litters.

About Embark

Embark Veterinary is a canine genetics company offering research-grade genetic tests to pet owners and breeders. Every Embark test examines thousands of genetic markers, and provides results for over 250 genetic health conditions, breed identification, clinical tools, and more.

Embark is a research partner of the Cornell University College of Veterinary Medicine and collaborates with scientists and registries to accelerate genetic research in canine health. We make it easy for customers and vets to understand, share and make use of their dog's unique genetic profile to improve canine health and happiness.
